THE NEXT DIMENSION OF HUMAN EXPERIENCE

Creating Hi-Fi 3D Virtual Reality of
Moving People

Immersive 4D Content

4D Scanner enables 3D reconstruction of a moving person through multi-view video recording. Without motion capture and 3D artists' post work, easily generate 3D moving human characters and implement them into your VR/AR video content. You can experience high-fidelity and photo-realistic 3D moving characters through the 4D Scanner developed with several patent technologies.

Demo Video - Trainer

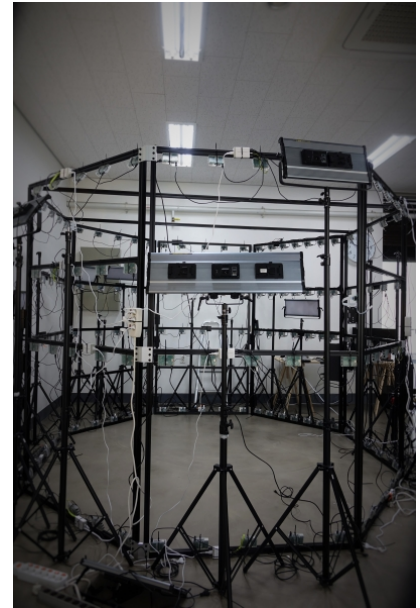

Product

4D SCANNER

4D Scanner Studio captures a video of a moving person from all directions and our cloud platform reconstructs the videos into 3D moving characters. Generating a high quality moving 3D human character is no longer expensive and complicated.

4D CONTENTS PLATFORM

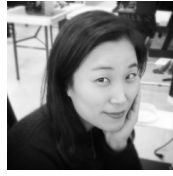

Video streaming of massive 3D data is now possible with Flux Planet's 4D Content Platform. Easily upload your 4D content and let people experience your immersive VR content.
